Heart: weak pulse, low BP, body weakness, dizziness, fainting, loss of consciousness

Affect: anxious, uneasy

COMMON ALLERGENS

Peanuts

Tree nuts (walnuts, almonds, etc.)

Milk

Egg

Sov

Wheat

Fish, shellfish

Insect stings (bee, wasp, etc.)

Medication

Latex

Idiopathic (unknown cause)

^{*}Fentanyl has also been found in drugs like Xanax, methamphetamine, and cocaine.

DJUSD Stock Emergency Medication Program

DAVIS JOINT UNIFIED SCHOOL DISTRICT

526 B Street Davis, CA 95616 Phone: 530-+757-5300

Fax: 530-757-5423 Email: djusd.net

Davis Joint Unified School District is concerned about the health and well-being of all our students and staff. It is our goal to bring awareness and understanding to our school community. California Education Code allows for stock medication for common life-threatening events including anaphylaxis (severe allergic reaction) and opioid overdose. The medications used to treat these life-threatening situations are safe and effective.

Liability Protection

The California Health and Safety Code and Civil Code give liability protection to those who render aid to a person who requires or reasonably appears to require emergency care.

Employee Volunteers

DJUSD needs employees to volunteer to be trained to provide emergency medication for opioid overdose or for anaphylaxis. No benefit will be granted to or withheld from any employee based on the offer to volunteer and there will be no retaliation against any employee for rescinding the offer to volunteer. Employee-volunteers will be provided written notice of defense and indemnification.

Training

Initial and annual training for administration of emergency medication for an opioid overdose and for administration of life-saving epinephrine for anaphylaxis will be provided by a credentialed school nurse or physician to all DJUSD employee-volunteers.

WHAT TO DO IF YOU THINK SOMEONE HAS OVERDOSED

Call 911

Give naloxone (Narcan)

Try to keep the person awake and breathing

Stay with them until emergency services arrives

It may be hard to tell if a person is overdosing. If you aren't sure—treat it as an overdose.

WHAT TO DO IF YOU THINK SOMEONE IS ANAPHYLACTIC

Call 911

Give Epinephrine (EpiPen)

Monitor for breathing and re-dose if symptoms do not improve

Stay with them until emergency services arrives

It may be hard to tell if a person is anaphylactic. If you aren't sure—treat with epinephrine.
